# 1. INTRODUCTION

---

## 1.1 Background: about OSHub.Network

The Open Science Hub Network (OSHub.Network), a consortium of nine partners across Europe, engages schools and local stakeholders in research and innovation as a tool for sustainable community development.

More specifically, the OSHub.Network is establishing a European network of community hubs – OSHubs, in communities that traditionally do not engage with research and innovation due to various barriers, geographical location, socio-economic status, or ethnic minority group background. OSHubs inspire, empower and engage citizens – from school children to senior citizens – in STEAM (Science, Technology, Engineering, Arts and Mathematics) learning and research opportunities, grounded on collaboration with societal agents.

As such, local OSHubs work as mediators in their local communities, positioning schools as active agents for collaboration between civil society, enterprises, research institutes, and families. This is performed by promoting an open schooling approach grounded in community-based participatory research practices: throughout this process, schools and communities identify local relevant challenges, which are then transformed into relevant research and innovation projects, led by students and teachers, in collaboration with local stakeholders.

The OSHub.Network is developing a common methodological framework, that allows each OSHub to identify and analyse local needs, issues, opportunities and relevant actors, in order to address socio-economic, geographical, gender equity issues, and untapped growth potential. Inspired by the “Mission-Oriented Research & Innovation in the European Union”<sup>1</sup> approach, developed by Mariana Mazzucato, OSHub.Network will define a set of Open Schooling Missions, aimed at addressing local relevant challenges linked to the Sustainable Development Goals. These Open Schooling Missions will then constitute the basis for the creation and development of the open schooling projects, enabling real collaboration across communities.

---

1 Mariana Mazzucato (2018), Mission-Oriented Research and Innovation in the European Union – A problem solving approach to fuel innovation-led growth’, European Commission, Retrieved from: [https://ec.europa.eu/info/sites/info/files/mazzucato\\_report\\_2018.pdf](https://ec.europa.eu/info/sites/info/files/mazzucato_report_2018.pdf)

Importantly, to ensure diversity, inclusion and sustainability, in each OSHub location, there will be a local management board with representatives from local stakeholder groups – schools (including students), families, research institutes and universities, enterprises, industry, media, local governments, civil society organizations and wider society – which will be involved in all key processes and decisions regarding local OSHub programmes and initiatives.

By supporting local schools and communities with the tools and network to tackle relevant challenges, OSHub.Network aims to create local impact while simultaneously promoting an active global citizenship attitude, thus contributing to community development, innovation and well-being.

To encourage usage and maximise impact in Europe and beyond, all resources, products and solutions developed by OSHub.Network will be fully based on Open Standards, such as open education, open technology, open science, open hardware, open design and open architecture. Also, OSHub.Network will create an online platform to share OSHub expertise, resources, and best practices with all OSHubs, their partners and the communities they serve. To ensure the legacy and reach of the project, all OSHub.Network resources will also be shared on existing large online educational repositories, and relevant national networks and repositories.

Finally, OSHubs will develop a legacy and sustainability plan, and will work closely with local governments, to ensure that each local OSHub has the tools and resources to continue beyond the lifetime of the project, and that the Open Schooling approach is incorporated in the school vision and organizational structure.

By the end of the project, it is expected that the OSHub.Network will have impacted 25 000 students, 1 250 teachers and 4 000 members of the community, through involvement in more than 150 school-university-industry-civil society partnerships in open schooling projects and activities.

In the long-run, we envision OSHubs as education brokers in their local communities, supporting local school networks to incorporate Open Schooling in their vision and organizational structure, leading to sustainable quality of education. Most particularly, OSHubs will facilitate the bridge between the needs and realities of schools and their local context and resources, as well as brokering for implementing national/regional policies, passing along signals from schools when policies are failing and advocating for context-sensitive policies.

## 1.2 Objectives of the Events Report

Throughout the 3 year duration of the project, OSHub.Network will organize and participate in several events targeted at a wide range of publics: schools (including students, teachers, Direction Board, staff), families, research institutes and universities, enterprises, industry, local governments, civil and wider society. These events can be divided in two broad categories: participation in conferences related to science communication, science education, citizen science, community-based participatory research; and organization and participation in STEAM education and Open Schooling initiatives and events.

In this deliverable we describe the events that the OSHub partners have organized/participated in during the second year of the project, and the list of events planned for the third year.

## 2. PARTICIPATION IN EVENTS BY OSHUB PARTNERS

In Table 1 we provide a list of the events in which OSHub partners participated during the second year of the project to disseminate the project, and in Table 2, the list of events planned for the third year.

Table 1: Events in which OSHub partners participated during the second year of the OSHub project (October 2020 – September 2021).

EVENT NAME	DATE / LOCATION	ROLE	TYPE OF PARTICIPATION	OTHER / COMMENTS
<b>OSHub Inspiration Session<sup>2</sup>: Webinar with Petr Mares, SCIN and Núria Castell, NILU, Norway</b>	2020-10-01, Online	Organizer (Consortium)	Monthly event series organized by OSHub to promote sharing of best practices, experiences and challenges around Open Schooling, Citizen Science and Community-Based Participatory Research. ## 3. CONCLUSION

---

Throughout the 3 year duration of the project, OSHub.Network will organize and participate in several events targeted at a wide range of publics: schools (including students, teachers, Direction Board, staff), families, research institutes and universities, enterprises, industry, local governments, civil and wider society. These events can be divided in two broad categories: participation in conferences related to science communication, science education, citizen science, community-based participatory research; and organization and participation in STEAM education and Open Schooling initiatives and events.

In this deliverable we described the events that the OSHub partners have organized/participated in during the second year of the project, and the list of events planned for the third year.
